

Third-party device support in AXIS Camera Station

Supported third-party devices

ONVIF Profile S conformant third-party devices that have been verified to work with AXIS Camera Station through [AXIS Camera Station Device Compatibility Tool](#).

Third-party device support details

AXIS Camera Station 5 and above supports third party devices according to definitions in the IEC62676-2-3 standard. The following are supported in third-party devices:

- Camera discovery
- Video: M-JPEG, H.264
- Audio : G.711 (one-way, from the device to AXIS Camera Station)
- One video profile per camera
- Live view
- Continuous and manual recording
- Playback
- Recording export
- Continuous Pan/Tilt/Zoom(Supported since 5.02.013)
- Motion detection triggered recording(Supported since 5.04.014)
- Device Event triggers(Supported since 5.04.014)

Some functionalities are available for Axis cameras but not for third-party devices:

- Input / output port management
- Camera management
- Image configuration
- Access from Axis Mobile viewing app
- Support for devices with multiple sensors / video channels.
